

Intranet Jumpstart

Jumpstart your intranet at a fixed price

More now than ever before, your employees need an intranet: one central place where they can find all information and support they need to work in the best possible way, including remotely. And now it is easier than ever to create an intranet solution. Intranet Jumpstart will allow you to do so at a fixed price.

Over the last five years, the number of employees working away from the office has quadrupled. In the same period, the number of teams in which they cooperate on projects has doubled. This has resulted in the need for a reliable, efficient means of communication and instant access to information.

There are many things that your employees are going to need to do while they are on the move or based remotely, and they will not always find it convenient to keep checking into the office to try and get things done. They may need to pre-order lunch for that meeting, or post a request for holidays or time off. Perhaps they need to access the company's HR resources... or schedule training for several colleagues.

The intranet can be way more than just a channel by which your company shares news with employees; it can be the place where they download and upload documentation, find answers to questions and collaborate with colleagues, from anywhere, at any time and on any device.

The intranet's flexibility also means that it promotes better communication and cooperation between colleagues and teams.

Expertise you can rely on

Over the past few years, it has become much easier to build a fully functional intranet.

One of the main benefits of our Intranet Jumpstart solution is that it is both easy to use and affordable.

You don't need any in-house experience either: at Inetum-Realdolmen, we can assure you of fast, efficient and professional implementation of your intranet solution. We guarantee clear, transparent pricing, clearly set and agreed to in advance. So no unpleasant surprises!

Convenient standard package

Intranet Jumpstart is a standard package that includes all the core components for building an intranet, including news feeds and tools for social interaction. At the same time, your intranet will also be unique to you, because we adapt it to your specific house style and requirements. We take our time to map out these requirements with you during an interactive workshop, so you know that what you get matches what you need.

Our experts take care of the set-up of all information architecture and its actual implementation, and they will also train your employees.

The main benefits of Intranet Jumpstart:

- an accessible, affordable solution for setting up your intranet
- a quick start-up, with standard, out-of-the-box Microsoft technology
- a personalized intranet with your own branding and house style
- easy and seamless integration with other Microsoft 365 solutions
- a host of possibilities for expansion, so your intranet can grow with you

Multiple possibilities for expansion

Intranet Jumpstart is an open, future-proof solution that can be a springboard for further expansion. In addition to plug-and-play upgrade suites, such as staff directories or social media plug-ins, our Power Lab experts can also build you a fully customized solution using the Microsoft Power Platform. For this you can choose from several "starter packs" offering varying levels of complexity and functionality.

Our proven, four-step approach

Each Intranet Jumpstart project will go through the following four steps:

- Understand: during an interactive workshop, we map the core components of your intranet, from information architecture and navigation to content and design.
- Define: in collaboration with your stakeholders, we define the architecture, content and design of your intranet.
- Implement: we implement your new intranet in short development cycles.
- Run: we train your content owners and users, and can also look after the maintenance of your intranet, if required.

Inetum-Realdolmen – your intranet partner

Do you want to start with a brand-new intranet? Or perhaps you want to modernize or expand your existing intranet, or move it to the cloud? Whatever your question, we build your intranet based on your requirements.
